Oman SATS Staff Iftar Gathering 31 Mar 2024

In an effort to host this Ramadan get-together in a spiritual setting during the holy month of Ramadan, Oman SATS arranged an Iftar for its staff, with the Management team participating. Their dedication to cultivating the Ramadan spirit and improving communication and cohesion among the staff is evident in this.

Oman SATS Government Agencies Iftar Gathering

Oman SATS organized Ramadan Iftar Gathering for all government agencies working in Cargo building at Muscat International Airport as a gesture of appreciation for our stakeholders in servicing the industry and the Sultanate of Oman.

Staff Engagement

Dhaigham Al-Sulaimi, borne in 1993, holds a higher diploma in information systems from Muscat College. Since 2017, he has been employed by the Oman SATS. He has worked in a number of departments, split between the import and export. He is currently working in the import section. Dhaigham discusses the difficulties he encounters at work and states that no job is without challenges and difficulties, regardless of one's skills and energy level. The important thing is to be ready to accept and handle these challenges and difficulties, no matter how big they may be.

Dhaigham continues his conversation of workplace competition, pointing out that competition should be a means to an end, not a goal in and of itself, so accepting defeat is unavoidable at times, but he always strives for success, which is what distinguishes true competition as being centered on continuing rather than stopping. About making your dreams come true.

Dhaigham expects a significant increase in air cargo traffic in the coming months. He also believes that various government agencies should provide ongoing support to this sector in order for it to grow on a regional and global scale.

Dhaigham enjoys spending his free time with friends and family because he likes to hear and chat about their latest events and share stories with them.

Dhaigham also thinks that working as a volunteer for a nonprofit organization or other establishment that helps people has a good impact on everyone.

In the near future, Dhaigham hopes to launch his own business with a novel idea in the marketplace. He plans to start small by selling specific tools and then grow the enterprise locally.

He expresses his heartfelt gratitude to the company's Management and everyone who helped to raise the level of work in it, as these efforts resulted in many significant accomplishments, which were only possible through hard work.

Guest On Focus

Sultan bin Salim Al Badi has spent long time working as a Customs Clearance Officer in the Operations Department of Majan Shipping Company at Muscat International Airport. His daily responsibilities include clearing shipments containing dangerous goods, as well as oil and gas shipments.

Because of the nature of these shipments, Sultan is like other customs Clearance; faces numerous challenges in dealing with them. Such as explosives, which require several procedures and arrangements with various military government agencies, such as the Royal Oman Police to ensure the safety of all employees and tools used in the transportation process. They also have difficulty dealing with heavy and large shipments because they require specialized equipment's for loading and unloading.

Sultan Al Badi continues his conversation by detailing his dealings with the Oman SATS, stating that many changes and developments have occurred in the company's systems, and those changes and developments are still ongoing. Allowing Customs Clearances to solve many problems related to various shipments and avoid many risks that arise as a result. Issues may arise as a result of handling these shipments.

Sultan talked about these wonderful technologies in Oman SATS. The various devices spread in the shipping building, as these devices enable them to follow up on all transactions in the import department, and the clearance of these shipments can also be followed through the company's website, and the amounts due on these shipments can also be followed up, and can be paid as well smoothly.

Sultan Al Badi anticipates that the next stage will see transactions processed faster, easier, more efficiently, and accurately as a result of the company's internal system development.

Sultan Al Badi continues to discuss Majan Shipping Company's future plans, which include providing more modern and effective equipment for handling heavy and large shipments.

He expressed his heartfelt gratitude to the Oman SATS for its ongoing support to its various clients. He also expressed his gratitude to Majan Shipping Company for honing his talents and abilities in customs clearance and providing him and his colleagues chance to occupy senior roles within the organization.

Efficiency & Waste Reduction Project

In every industry, continuous improvements in efficiency, production, and innovation pave the path to profitability. Lean Management is a business model that can help organizations achieve these goals and more. Lean purpose is to transform organization culture into one that values continuous improvement over the long term.

This aligns with Oman SATS core value Excellence and Innovation. Efficiency and waste reduction are one of Oman SATS project aiming to remove wastes and seeking to become more efficient in all processes and Go Green. The first phase of this project started looking for paperless initiatives in all sections across the company.

Some of the benefits that are offered by going paperless are reductions in paper-related expenses such as physical storage space and increased employee productivity through easy access to information, reduce carbon footprint etc. Using electronic forms, sharing soft copy certification, applying leave electronically without filling up the forms, digital gate pass application are some examples moving towards a paperless culture. Focus of phase two will be on removing waste of surplus number of printers.

Reach out to project owners to convert all wastes to benefits by sharing more initiatives to implement:
